Professional Summary

DevOps Engineer with 4+ years of experience building and operating production-grade AWS EKS platforms. Proficient in GitOps using ArgoCD and Infrastructure as Code with Terraform, enabling reliable and automated application delivery. Focused on improving deployment stability, reducing operational overhead, and supporting zero-downtime releases.

Technical Skills

Cloud Platform: AWS (EKS, EC2, S3, IAM, VPC, ELB, Auto Scaling, CloudWatch, Lambda, Route53)

Containerization & Orchestration: Docker, Kubernetes, Helm, Kustomize

Infrastructure as Code: Terraform, CloudFormation

CI/CD & Version Control: GitHub Actions (Rio), ArgoCD, Git, GitHub

Scripting & Programming: Python, Bash

Observability & Incident Management: Splunk, Grafana, PagerDuty

Operating Systems & Networking: Linux, Nginx, DNS, Load Balancing, SSL/TLS, TCP/IP

DevOps Practices: GitOps, Blue-Green Deployment, Canary Deployment, Infrastructure Automation, Troubleshooting & Production Support

---

Professional Experience

Tata Consultancy Services – DevOps Engineer

Client: Apple | Dec 2021 - Present

Project: EBS Platform (DevOps Engineer)
Environment: AWS, Kubernetes, Helm, ArgoCD, Python, Rio (GitHub Actions), Terraform

Responsibilities:

- Managed application deployments to AWS EKS using Helm charts and ArgoCD GitOps workflows
- Configured and maintained CI pipelines using Rio for continuous integration
- Developed Python automation scripts to manage GitHub repositories and configurations
- Administered GitHub repositories including branch strategies and webhook integrations
- Standardized pull request templates across multiple repositories to improve review process consistency

Key Achievements

- Implemented GitOps deployment using ArgoCD, eliminating manual releases
- Automated GitHub repository, branch, and webhook creation using Python, eliminating manual configuration effort
- Implemented Docker image optimization using multi-stage builds and efficient layer caching, reducing image size by ~40% and improving CI/CD pipeline performance by 50%
- Designed and implemented cloud-native architectures leveraging AWS services including API Gateway, Lambda and DynamoDB, achieving 30% reduction in infrastructure cost while improving system scalability by 50%

Project: MSI Platform (Site Reliability Engineer)
Environment: AWS, Linux, PagerDuty, Splunk, Grafana
Responsibilities

- Handled production incidents and on-call support
- Performed root cause analysis and service restoration
- Monitored system health and alerts

Key Achievements

- Improved service uptime to 99.9% by proactive monitoring
- Reduced recurring incidents through automation and fixes
- Created dashboards and alerts for faster detection of issues

---

Certifications

- HashiCorp Terraform Associate (HCTA0-004)
- AWS Certified Developer – Associate (DVA-C02)
- Certified Kubernetes Administrator (CKA) (Exp. Sep 2026)

Education

- SCSVMV University, B.E Mechanical Engineering, CGPA 8.96/10, 2020
